                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes, (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to reparating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, u diagnostics, forensics, gene mapping, identification of responsible for genetic disorders or other traits and tresponsible for genetic disorders or other traits.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc mitogen activated protein kinase inhibitor in admixture with a carrier.

cc The method involves activation of a biological pathway producing an clindicator of the processing of amyloid-beta precursor protein e.g. a composition protein e.g. a comprising AEG09266 AEG09268. The composition for treating or proveries a label indicating use cft the composition for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition. The agent is cuseful in the manufacture of a medicament for inhibiting the processing of amyloid-beta precursor protein in a subject suffering from or cusceptible to the abnormal processing of the protein, or for treating or preventing a condition involving consecution a condition involving consecution in a subject suffering from or consecution a precursor protein in a subject suffering from or cusceptible to the abnormal processing of the protein, or for treating or preventing a condition involving cognitive impairment or a susceptibility to the condition, preferably, Alzheimer's disease. This sequence encodes that a kinase involved in the up-regulation of amyloid-beta 1-42.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC c-Jun N-terminal kinase 3 (JNK3) expression or activity. The method CC comprises (a) incubating a cell that can express a JNK3 protein, or that CC has JNK3 activity, with a compound under conditions and for a time CC sufficient for the cell to express a JNK3 protein/activity without the compound; (b) incubating a control cell under the same conditions and for the same time without the compound; (c) measuring JNK3 expression/CC activity in the cell in the presence of the compound; (d) comparing the CC compound, where a difference in the level of expression/activity. The CC indicates that the compound modulates JNK3 expression/activity. The CC invention also provides a transgenic non-human mammal having a transgene CC disrupting expression of a JNK3 gene, the transgene being chromosomally CC e.g. antisense nucleic acids, are used to treat disorders involving CC excitotoxicity, e.g. Alzheimer's disease, Huntington disease, Parkindon's CC disease or epilepsy. JNK3 sequences under GenBank accession numbers CC U34819, U34820, U07620, L27128, L35236, X12740 and V00727 can be used in CC field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         #X#X6666666666666666666666666666666888

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method of identifying a candidate insulin receptor (INR) signaling modulating agent, involving contacting an assay system comprising an insulin receptor signaling modifier (ISM) polypeptide or nucleic acid with a test agent, and detecting a test agent dentifying candidate INR signaling modulating agents. ISM genes may be used as drug targets for treatment of disorders related to INR signaling such as diabetes or metabolic syndrome. ISM nucleic acids and polypeptides are useful for identifying and testing agents that modulate ISM function and for other applications related to the involvement of ISM in INR signaling, and for identifying subjects having a predisposition to such diseases associated with INR signaling. The present sequence is an ISM coding sequence described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     12-JAN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a combination which, comprises a number of CC polynucleotide probes comprising a sequence selected from one of the 1490 CC sequences mentioned in the specification. The combination is useful as an CC array element in a microarray for monitoring the expression of a number CC of target polynucleotides. The microarray is particularly useful in the CC diagnosis and treatment of cancer and immunopathology and neuropathology. CC The microarray is useful in diagnostics and treatment regimens, drug CC discovery and development, toxicological and carcinogenicity studies, CC forensics and pharmacogenomics. The microarray is also useful for CC monitoring progression of diseases and for developing sophisticated. CC profiles for the effects of currently available therapeutic drugs. The CC combination is also useful for purifying a subpopulation of mRNAs, CDNAs and genomic fragments and in research and diagnostic applications. The CC cardy can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose CC various diseases including cancer e.g. adenocarcinoma and leukaemia, CC immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease and parkinson's disease. The present sequence atta for this patent did not form part of the invention. Note: The sequence atta for this patent did not format directly from USPTO at the printed specification but was obtained in electronic combinations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                밁
                                                                                               Ş
                                                                                                                                                                                                                                                 CC comprising first polynucleotide probes comprising at least a portion of a gene encoding a receptor-like polypeptide, second polynucleotide probes CC comprising at least a portion of a gene encoding at transducing CC polypeptide and third polynucleotide probes comprising at least a portion of a gene encoding an effector-like polypeptide. The probes of the CC composition are useful as array elements in a microarray for monitoring CC characteristic polynucleotides. The microarray for monitoring CC diagnosis and treatment of cancer, an immunopathology or a neuropathology. It can also be used for drug discovery and development, CC neuropathology. It can also be used for drug discovery and development, CC microarray can also be used for monitoring the progression of diseases CC Microarray be associated with the altered expression of signalling pathway CC polypeptides. The composition can also be used to purify a subpopulation CC is also useful for the diagnosis and treatment of cancer, e.g. cancers of the adrenal gland, bladder, bone marrow, brain, breast or cervix, CC unicroarray for a neuropathology, e.g. Alzheimer's disease or depression. This sequence data for this patent did not form part of the printed specification but was contained in electronic format directly from USPTO at

The method of the invention has cytostatic applications and may be useful for identifying a subject at risk of breast cancer, for early diagnosis, prevention and treatment of breast cancer, possibly via gene therapy, as well as to analyse and predict a response to a breast cancer treatment and in clinical drug trials. The current sequence is that of the human MAP kinase MAPK10 (NWA3, NWA3, p493F12, p54bSAPK MAP kinase; c-Jun kinase 3;NWA3 alpha protein kinase; c-Jun N-terminal kinase 3; stress activated protein kinase beta) cDNA of the
 cytostatic; gene therapy; human;

                                                                                                                                                                                                                                                                                                                                The invention describes a method of identifying a candidate branching morphogenesis modulating (MBM) agent. The method comprises; providing an assay system comprising a MBM polypeptide or nucleic acid; contacting the assay system with a test agent under conditions where the system provides a reference activity, except for the presence of the test agent; and detecting a test agent-blased activity of the assay system, where a difference between the test agent-blased activity and the reference activity identifies the test agent as a candidate branching morphogenesis in a mammalian cell; and a method of modulating branching morphogenesis in a mammalian cell; and a method for diagnosing a disease in a patient. The method is useful in identifying a candidate branching morphogenesis modulating agent for preparing a composition for diagnosing or treating cancer. This sequence encodes a human branching morphogenesis
                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying a candidate branching morphogenesis modulating agent treating cancer comprises contacting the assay system comprising polypeptide or nucleic acid with a test agent and detecting a test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Plowman GD, Karim FD, Swimmer C,

                                                                                                   á
                                                                                                                                                                                                            This invention describes a novel method of identifying a compound that coinhibits the processing of amyloid-beta precursor protein in a mammalian cell. The invention also describes; a) an agent for inhibiting amyloid-beta precursor processing consisting of an antisense polynucleotide, a concurring polynucleotide processing of an antisense polynucleotide, a concurring polynucleotide sequence encoding the polypeptide comprises a composition comprising the agent for inhibiting amyloid-beta mino acid sequence of AEG09278 or AEG09279 and b) a pharmaceutical composition comprising the agent for inhibiting amyloid-beta precursor processing or an amyloid-beta precursor processing-inhibiting amount of a mitogen activated protein-kinase inhibitor in admixture with a carrier. The method involves activation of a biological pathway producing an composition for the expression of a reporter e.g. alkaline phosphatase. Composition further comprising AEG09266-AEG09268. The pharmaceutical composition further comprises a label indicating use of the composition for treating or preventing a condition. The agent is consecutive impairment or a susceptibility to the condition. The agent is cusceptible to the abnormal processing of the protein, or for treating or preventing a condition involving of amyloid-beta precursor protein in a subject suffering from or cusceptible to the abnormal processing of the protein, or for treating or preventing a condition preferably, Alzheimer's disease. This sequence encodes chuman mitogen-activated protein kinase 10 (MAPKIO), transcript variant 1, a kinase involved in the up-regulation of amyloid-beta 1-42.
                                                                                                                                      Query Match

                                                                                                             The invention relates to novel human diagnostic and therapeutic polynucleotides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHF) ABR41136-ABR41812). The invention also relates to polynucleotide sequences at least 90% identical to the dithp cDNA comparisons comprising a dithp nucleic acid sequence; the transgenic organisms comprising a dithp nucleic acid sequence; the crecombinant production of DITHF proteins; antibodies specific for DITHF proteins; microarrays comprising a dithp nucleic acid sequences; methods of contents of dithp nucleic and sequences; methods of contents of the toxicity of test compounds using a dithp hybridiation of assessing the toxicity of test compounds using a dithp hybridiation cropose. Dithp nucleic acid sequences and DITHF proteins may be used in the diagnosis of a wide variety of conditions including cancer and other cell proliferative disorders; autoimmune or inflammatory disorders; bacterial, curval, fungal or parasitic infections; hormonal disorders; metabolic disorders; and connective tissue disorders. They may also be used to be of the conditions of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human diagnostic and therapeutic polypeptide useful for identifying test compound which specifically binds to a polypeptide encoded by human diagnostic and therapeutic polynucleotide, and to induce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Dufour GE, Hillman JL, Yu JY, Tuason O, Daughtery SC, Dam TC, Liu TF, Nguyen DA, Peralta CH, David MH, Lewis SA, Chen AJ, Flores V, Marwaha R, Lo A, Lan RY, Urash
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene therapy; antisense therapy; genot disease model; toxicological testing; intracellular signalling; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                   The invention relates to a new composition comprising ADI61633-ADI61770 and their complements that are cDNAs differentially expressed in brain disorders. Also included are a high throughput method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids and a high throughput method for screening a library of molecules or compounds to identify a ligand that specifically binds a cDNA. The expression of the each of the cDNAs is downregulated at least two-fold in the brain of the subjects with Alzheimer's disease (ADI61727) or upregulated at least two fold in Alzheimer's disease (ADI61728-ADI61770). The composition is useful for diagnosing or treating Alzheimer's disease. The present sequence is a cDNA downregulated at least two-fold in the brain of the subjects with Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mentioned above, as a source of antisense sequences, as a source of probes and primers, in genotyping and identification of individuals, in the generation of transgenic animal models of human disease or knock in humanised animals, in toxicological testing, and in transcript imaging. The present sequence representes a dithp cDNA encoding a DITHP protein which has intracellular signalling activity. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
treatment or for the monitoring of treatment of a subject with a brain disorder. (I) comprises several cDNAs that are differentially expressed in brain disorders and chosen from any one of 138 nucleotide sequences of AEA43798-AEA43935, or their complements. Also described: (1) a high Ct throughput method for detecting differential expression of one or more CDNAs in a sample containing nucleic acids; (2) an isolated CDNA (II) containing nucleic acids; (2) an isolated CDNA (II) containing (III); (5) a protein (V) produced using (IV) and (6) a pharmaceutical composition comprising (V). (I) is useful Cf or a high throughput method of screening a library of molecules or compounds to identify a ligand which specifically binds a CDNA, where the method involves combining (II) with the library of molecules or compound to identify a nolecule or compound to a contain, which involves culturing (IV) under conditions to allow specific binding and detecting specific binding the expression of the protein and recovering the protein from the culture. (V) is useful for bigh throughput method for screening a library of molecules or compounds to identify a ligand which specifically binds or conditions for the expression of the protein and recovering the protein from the CC culture. (V) is useful for high throughput method for screening a library of molecules or compounds to identify a ligand which specifically binds (V), where the method involves combining (V) or its portion with the

The invention relates to a polynucleotide (I) comprising: (a) a regulatable promoter; (b) a test gene; (c) an IRES sequence; and (d) a surface marker coding sequence comprising a secretion signal sequence, a detectable label protein and a membrane protein where expression of the test gene also results in expression of the surface marker. A method is provided for identifying a host cell that exhibits regulated expression of a test gene complex that comprises (a) providing more than one host cell; (b) inducing the promoter; and (c) selecting a host cell that displays the surface marker on its surface. (I), the host cell and the method are useful for the rapid isolation of candidate eukaryotic cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 library of molecules or compound under conditions to allow specific binding and detecting specific binding between (V) and a molecule or compound. (V) is useful for purifying a ligand from a sample, which involves combining (V) or its portion with the sample under conditions to allow specific binding, recovering the bound protein and separating the protein from ligand. (V) is also useful for producing an antibody, which involves immunizing an annimal with (V) or its portion under conditions to elicit an antibody response, isolating animal antibodies and screening the isolated antibodies with the protein. (II) is useful in gene therapy for the treatment or prevention of conditions and disorders associated with immune response. The present sequence represents a human cDNA sequence which is differentially expressed in brain tissues, which is useful in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                 Polynucleotide for rapid isolation of candidate eukaryotic cell clones comprises a promoter, a test gene, an IRES sequence and a surface marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IRES; internal
label protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2001-476284/51.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-FEB-2000; 2000US-0179893P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          02-FEB-2001; 2001WO-US003411

                                                                                                                            A cDNA clone (AAT10640) was obtd. that codes for rat proline-directed stress-activated protein kinase (SAPK) p54 beta-I (AAR89410). This cDNA, and others (see AAT10638-39 and AAT10641-42) coding for p54 alpha-I, alpha-II, beta-II and gamma (AAR89408-9 and AAR89411-12), were isolated from a rat brain cDNA library following PCR amplification using primers based on p54 tryptic peptides obt. from a cycloheximide-treated rat
                                                                                                                                                                                                                                                                                                                                                            DNA encoding recombinant P54 stress activated protein kinase related antibodies, useful for treating inflammation, hypoxia
                                                                                                                                                                                                                                                                                          Claim 20; Page 44-45; 68pp; English
                                                                                                                                                                                                                                                                                                                                            stress, and
                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1996-106355/12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09-MAY-1994;

                                                                                                                                                                            The invention relates to identifying pain-regulating substances (A) comprises (i) incubating a test substance with a cell (or preparation from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analyssic activity. (A) along with nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB85006-ABB85037) that interact with (A); (B); vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                               and

The method is useful for identifying pain-regulating substances (A) with analysis activity. (A) along with nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB85006-ABB85037) that interact with (A); (B); vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain; including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polynucleotide of the invention

                                                                                                                                                                                                                                                                                                 A cDNA clone (AAT10641) was obtd. that codes for rat proline-directed stress-activated protein kinase (SAPK) p54 beca-II (AAR89411). This cl and others (see AAT10638-40 and AAT10642) coding for p54 alpha-I, alph II, beta-I and gamma (AAR89408-10 and AAR89412), were isolated from a brain cDNA library following PCR amplification using primers based on tryptic peptides obt. from a cycloheximide-treated rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding recombinant P54 stress activated protein kinase related antibodies, useful for treating inflammation, hypoxia stress, and for drug screening.

This cDNA, and others (see AAT10638-41) coding for p54 alpha-I, alpha-II, beta-I at beta-II (AAR89408-I1), were isolated from a rat brain cDNA library following PCR amplification using primers based on p54 tryptic peptides obt. from a cycloheximide-treated rat

Predicting the liver toxicity of an agent to an individual by using test expression profile with a set of reference expression profiles Predictive Model to determine whether the agent will reduce liver toxicity in the individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method used for evaluating the toxicity of an agent comprising determining the expression of a rat toxic response gene(s) in the test animal in response to the agent. The method is useful in drug development, particularly for conducting toxicity studies and analysis before a new drug or compound is approved for human consumption or use. The method is also useful in determining toxicological responses to a new drug. This polynucleotide sequence represents a phase-1 rat CT gene of the invention

The present invention describes a method for predicting the liver toxicity in an individual to an agent. The method comprises: (a) obtaining a biological sample from the individual treated with the age (b) measuring the expression of one or more liver toxicity predictive genes in the sample; and (c) using the test expression profile with a of reference expression profiles in a Predictive Model to determine whether the agent will induce liver toxicity in the individual. Also described: (1) predicting the liver toxicity in a agent using an in vitro system; (2) predicting the liver toxicity in a biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for predicting the liver toxicity of an agent to an individual comprising obtaining a biological sample from an individual treated with the agent, measuring the expression of one or more liver toxicity predictive genes in the sample and using the test expression profile with a set of reference expression profiles in a predictive model to determine whether the agent will reduce liver toxicity in the individual. The method of the invention may be useful for predicting the liver toxicity of an agent to an individual. The current sequence is that of the liver toxicity predictive DNA of the invention which represents a 24 hour combo All gene.
                                                                                                                                                                                                                                                                                                                                                                   Predicting the liver toxicity in an individual to an agent by
the expression of one or more liver toxicity predictive genes
sample from the individual treated with the agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09-MAY-2003; 2003WO-US014832

detecting the altered expression of genes in a toxic response of the spleen, where the cDNAs comprises 50-816 base pairs (ADR91045-ADR91348) or their complete complements. The invention further comprises: monitoring the treatment of compound toxicity in a sample; predicting the spleen toxicity in an individual to an agent; predicting the spleen toxicity of an agent using an in vitro system; a computer program product for predicting spleen toxicity from an expression profile of nucleic

responses species.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc acids from a sample under test, comprising a computer readable medium cc bearing an encrypted training data set, encrypted lists of genes selected cc from the cDNAs, and a predictive model for causing a general purpose cc computer to predict the spleen toxicity of the sample based upon the cc training data set, the list of genes selected from the cDNAs, and the cc expression profile of nucleic acids from the sample; and an integrated cc system for predicting spleen toxicity, comprising means for measuring cc gene expression profiles of spleen predictive genes from samples exposed ct to the test agent and a computer system operably linked to the means that cc is capable of implementing a predictive model. The composition comprising cc cDNAs is useful for detecting altered expression of genes in a toxic cresponse of the spleen or for predicting toxic responses to one or more capens including lymphoid tissue types or other species. The predictive genes and models of the invention are useful for identifying and cc evaluating various in vitro systems that can be used to accurately predict in vivo toxicity. This polynucleotide sequence represents one of the genes predictive for spleen necrosis of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

New polynucleotides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or targets of gene therapy.

The invention discloses a polynucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide CC of the polynucleotide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide CC of the polynucleotide by contacting the polypeptide or peptide CC peptide of the encoded protein, and observing the binding CC expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe CC proteins are useful as pharmaceutical agents and many disease-related CC genes may be included in them, for developing a diagnostic marker or CC of gene therapy. The genes are involved in tissue and/or cell cc regeneration. Membrane proteins, signal transduction-related proteins, can be used as indicacors for diseases (e.g. osteoporosis, cercoding them can be used as indicacors for diseases (e.g. osteoporosis, cercoding them can be used as indicacors for diseases (e.g. osteoporosis, cercoding them can be used as indicacors for diseases (e.g. osteoporosis, cercoding them can be used as indicacors for diseases (e.g. osteoporosis, cercoding them can be used as indicacors for diseases (e.g. osteoporosis, cercoding them can be used as indicacors for diseases (e.g. osteoporosis, cercoding them can be used as indicacors for diseases. The equilate to the activity or expression of the encoded protein to treat diseases. The sequence proteins and controlled specification, but the sequence of the s

                                                                                                                                                                                                                                                                                                                                                                 JNK1 (See AAR70767) and JNK2 phosphorylate the c-Jun N-terminal activation domain which affect gene expression from Ap-1 sites. The 2 protein kinases allow the detection of the level of specific kinase activity associated with activation of c-Jun and Ap-1. Cell proliferative disorders associated with JNK can be treated by administering a therapeutically effective amount of a reagent which modulates JNK activity. Disorders such as leukaemia, cancers of prostate, lung (nonsmall cell) and colon. (Updated on 25-MAR-2003 to correct PN field.)

CC The invention relates to a method of treating an immunological disorder, con-malignant cell-proliferative disorder, leukaemia, an organ related CC malignancy or acute inflammation, associated with c-Jun N-terminal kinase CC (JNK), comprising administering to a subject, a compound which modulates CC the kinase activity. The method is useful for treating an immunological CC disorder, non-malignant cell-proliferative disorder; leukaemia, an organ CC related malignancy and acute inflammation. The disorder is associated CC with immunological disorder is an immunopathological disorder and is CC respiratory distress syndrome (ARDS), AIDS or rheumatoid arthritis. The CC disorder associated with non-malignant cell-proliferative disorder is CC psoriasis, pemphigus vulgaris, ischaemic heart disease, leukaemia, post CC dialysis disorder and vasculitis. In organ related malignancy, the 'organ CC tisact. The present sequence represents cDNA encoding c-Jun N-terminal CC tract. The present sequence represents cDNA encoding c-Jun N-terminal

                                                   which is useful for treating a cell proliferative disorder, where the effect is inhibition or stimulation of the kinase, and the composition is an immunosuppressing agent. The composition identified by the above method, is useful for treating a cell proliferative disorder e.g. cancer psoriasis, pemphigus vulgaris, Behcet's syndrome, acute respiratory distress syndrome (ARDS), ischaemic heart disease, leukaemia, rheumatoid
                                                                                                                                      The invention relates to a method of identifying a composition useful treating a proliferative disorder, affecting a kinase having serine an threonine kinase activity and phosphorylating a c-Jun N-terminal activation domain. The method is useful for identifying a composition
                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                       Identifying a composition useful to treat a cell proliferative disorder, comprises incubating the composition and a serine/threonine kinase or polynucleotide encoding the kinase and measuring the effect of the composition on the kinase.
                                                                                                                                                                                                                                                                                                               P-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 á
contained modifications, namely phosphorothioate linkages and 2'methoxyethoxy bases. Some C residues also had a 5'methyl modification. Inhibitors of the TNF alpha signalling molecules have antibacterial, immunosuppressive, antipsoriatic, antidiabetic, antithyroid, cytostatic, dermatological, antiallergic and antiinflammatory activity. The antisense inhibitors may be useful for the treatment of sepsis, rheumatoid arthritis, inflammatory immune disease, inflammatory bowel disease, allergic contact dermatitis, psoriasis, diabetes, Grave's disease, allograft rejection and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A novel method for modulating cell adhesion molecule expression involves antisense inhibition of a tumour necrosis factor (TWF) alpha signalling molecule. In the method TNF alpha signalling molecules Ha-ras, C-raf and C-Jun N-terminal kinase (JNK) 2 were inhibited by antisense oligonucleotides. In addition an antisense oligonucleotide to the cell adhesion molecule E-selectin was also examined. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                         human JNK2 DNA. This sequence was used to generate the JNK2 antisense oligonucleotide. The antisense oligonucleotide used in the method contained modifications namely should be a second to the method contained modifications namely should be a second to the method contained modifications namely should be a second to the method contained modifications namely should be a second to the method contained modifications namely should be a second to the method contained modifications namely should be a second to the method to the second to the second to the method to the second to the second to the method to the second 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulating cell adhesion molecule expression for treating immune or inflammatory diseases involves treating cell with specific inhibitor of Tumor Necrosis Factor alpha signaling molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antisense; E-selectin; TNF alpha; cell adhesion; human; tumour necrosis factor alpha; phosphorothioate; methoxyethoxy; sepsis; rheumatoid arthritts; inflammatory; immune disease; inflammatory bowel disease; allergic contact dermatitis; psoriasis; diabetes; Grave's disease; allograft rejection; cancer; antibacterial; immunosuppressive; antipsoriatic; antidiabetic; antithyroid; cytostatidermatological; antiallergic; Ha-ras; c-raf; c-Jun N-terminal kinase;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

UI-E-CKI is a normalized CDNA library containing the
following tissue(s): Retina Foveal and Macular. The
library was constructed according to Bonaldo, Lennon and
Soares, Genome Research, 6:791-806, 1996. First strand
cDNA synthesis was primed with an oligo-dT primer
containing a Not I site. Double stranded cDNA was ligated
to an EcoR I adaptor, digested with Not I, and cloned
directionally into pT7T3-Pac vector. The oligonucleotide
used to prime the synthesis of first-strand cDNA contains
a library tag sequence that is located between the Not I
site and the (dT)18 tail. The sequence tag for this
library is GTCC. This library was created for the program,
Gene Discovery in the Visual System, supported by National
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /clone="UI-E-CK1-agb-1-15-0-UI"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /mol_type="mRNA"

/ (note "Net Coll name of Diastocyst stage embryos and the inner cell mass of blastocyst stage embryos and differentiated to an early neural progenitor cell type.
Cell line id and NIH Registry designation is BGO1.
Positive for Nestin and Musashi expression. Passage number 18. cDNA primed using oligo-dT primer:
5'-pGACTAGTTCTAGATCGCAGCGCGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. This primary library is non-normalized (normalized primary library is NIH MGC 259). It was constructed by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Note: this is a Mammalian Gene Collection library."
